

16 February, 2009

To Whom It May Concern:

Michael Baker Jr., Inc. (Baker) provides professional engineering and consulting services to government and private entities. As part of the environmental engineering services we provide to the federal government, we assist Defense Energy Supply Center in maintaining the integrity of bulk fuel storage and distribution systems world-wide. Baker has used Mr. Jackson's company Pipeline Petroleum Services, Inc as a subcontractor for numerous projects in accomplishing integrity testing and evaluations of fuel pipelines for the government dating back to December of 2006.

Pipeline Petroleum Services, Inc has been involved with more than 16 projects while working as a subcontractor for Baker. This work has covered most of the east coast of the United States with projects from Florida to Maine. Pipeline Petroleum Services, Inc has also worked on projects in Pearl Harbor, HI for Baker. Work on these projects has included pressure testing (hydrostatic and pneumatic) of pipelines, Pipeline Evaluations (including "Intelligent Pigging") and pipeline repairs.

All testing Pipeline Petroleum Services, Inc has done has been certified and recognized by state and federal government environmental regulators as official testing and documentation that comply with environmental regulations and requirements.

Pipeline Petroleum Services, Inc is recommended without reservation to provide integrity testing, evaluations and repairs of fuel pipelines. Baker intends to continue to use Pipeline Petroleum Services, Inc for fuel pipeline testing requirements for both periodic and emergency response issues.
